SUMMARY

Platform and DevSecOps engineer with 10+ years building secure cloud infrastructure across Kubernetes, networking, observability, and automation. I build production platforms, security controls, and operational workflows that reduce toil and hold up under real incidents. Most recently Staff Operations Engineer at ExpressVPN, leading global platform and security initiatives; currently DevSecOps Engineer at STIM, building out the internal Kubernetes platform and security detections.

TECHNICAL SKILLS

Cloud & Platform: AWS, GCP, Azure; Kubernetes (EKS, GKE, K3s); Terraform, Ansible, ArgoCD/GitOps; Helm, GitHub Actions.

Security: Zero trust, OIDC/SAML/RBAC, SIEM, threat modelling, CIS/NIST hardening, PKI.

Observability: SLOs, Prometheus, Grafana, OpenTelemetry, incident response.

Networking: BGP, VPN/proxy architectures, traffic analysis, protocol obfuscation.

Languages: Python, Go, Bash.

AI tooling (side projects): LLM APIs (OpenAI, Anthropic, Gemini), MCP, agent workflows, human-in-the-loop automation.

EXPERIENCE

DevSecOps Engineer

Nov 2023 – Present

STIM, Stockholm, SE

- Designed and built the internal Kubernetes platform end-to-end: Terraform, Ansible, and custom Python automation provisioning VMs, networking, DNS, and storage, with ArgoCD/GitOps managing cluster addons (ingress, operators, etc.). Cut new-cluster provisioning from days to under 20 minutes.
- Implemented enterprise SIEM and detection workflows on Microsoft Sentinel, reducing security alert MTTD from days to minutes.
- Added an LLM agent (via Azure Logic Apps) to the Sentinel incident workflow that summarises and contextualises alerts, so routine incidents can be triaged at a glance.
- Automated server patching with Azure Arc, standardising maintenance windows and cutting ~100 hours/year of after-hours work.
- Hardened CI/CD pipelines to CIS benchmarks and rolled out 1Password as the org-wide secrets store.

Staff Operations Engineer

Apr 2021 – Jul 2023

ExpressVPN, Hong Kong / Remote

- Technical owner for the global launch of ExpressVPN Keys; defined operational readiness, support model, and sub-15-minute cross-region failover design.
- Reverse-engineered how adversarial networks fingerprinted and blocked VPN traffic, then shipped continuous protocol-level countermeasures (proxy protocols, packet obfuscation) that kept the service reachable for users in heavily censored regions.
- Built and ran the Prometheus/Grafana observability stack (dashboards, metrics, log collection) used to monitor 3,000+ servers and the global proxy fleet.
- Operationalized regional accessibility work: converted ad-hoc specialist tasks into documented playbooks and training for the global service desk, reducing escalations.
- Led weekly releases across 3,000+ VPN servers with canary deploys, sustaining 99.9% uptime.
- Co-designed the Operations technical interview loop and conducted 50+ technical interviews, evaluating candidates against production engineering scenarios.

Senior Cloud & Infrastructure Engineer

Apr 2019 – Apr 2021

ExpressVPN, Hong Kong

- Designed and led deployment of the corporate network across offices (firewalls, switching, routing) with zero-trust controls on Palo Alto firewalls, reducing lateral-movement risk.
- Automated IAM via Okta across 200+ SaaS apps, cutting user provisioning from 3 hours to 15 minutes.
- Delivered secure remote-work infrastructure for 1,000+ staff during COVID with zero downtime.

IT Infrastructure & Operations Manager

Sep 2017 – Apr 2019

Universum Communications AB, Stockholm, SE

- Led IT operations and reliability for the Stockholm headquarters (100–200 staff) and satellite offices in New York, London, Singapore, Shanghai, Germany, and Switzerland.
- Owned technical due diligence and the G Suite to O365 migration during M&A.
- Drove GDPR readiness through technical controls and data governance.

IT Engineer

Sep 2015 – Sep 2017

ExternIT, Stockholm, SE

- Promoted internally from Binero (same group). Managed Windows/Linux servers and Cisco/HP networks for MSP clients; improved reliability through monitoring and automation.

Support Engineer

Oct 2014 – Sep 2015

Binero AB, Stockholm, SE

- Provided L1 and L2 support for Linux web hosting, DNS, and email, including escalations from other engineers.

EDUCATION

Högskolan i Skövde

2011 – 2014

Computer Game Development, coursework

Linköpings Universitet

2008 – 2011

Communication, Media & Society, coursework

SIDE PROJECTS

Built outside of core role responsibilities.

- **Trading research stack:** MCP server exposing Interactive Brokers tools to LLM agents with audit logging and human-in-the-loop approvals; agentic workflows for portfolio analysis using live broker APIs.
- **LLM integrations:** Hands-on experience with OpenAI, Anthropic, and Gemini APIs; evaluated cost, latency, reliability, and workflow trade-offs.
- **Ops assistants:** Telegram and Slack bots wrapping LLMs as daily operational assistants; full-stack apps across API, backend, and frontend.
